

Precautions After Thread Lift

After the Procedure:

- Swelling, bruising, a sensation of foreign objects, and pain may occur at the treatment site and typically diminish gradually over a few days.
- After your procedure, please refrain from drinking alcohol, smoking, using saunas or steam rooms, engaging in vigorous exercise, and swimming for about 1 to 2 weeks.
- Gentle, non-irritating cleansing and makeup application are permissible starting the day after the procedure.
- The DuoDERM tapes (for bacterial infection prevention and skin protection) applied to the area can be removed once it naturally falls off. There is no need for additional application, and please do not remove them on purpose.
- After the procedure, avoid opening your mouth wide or eating hard or chewy foods to prevent stress on the treatment area, and refrain from rubbing or massaging the site.
- Please take the prescribed medication to prevent inflammation.
- Occasionally, threads may poke through the skin in the treatment area. If this occurs, please do not touch them with your hand and contact us immediately for guidance.
