Precautions After Contouring Injection

- Light makeup and washing are possible at least 3-4 hours after the procedure.
- It is advisable to avoid saunas, steam rooms, swimming, alcohol, and smoking for about 1 week after the procedure.
- Swelling, sensations of heat, pain, or itchiness may occur after the procedure; these symptoms typically subside within 1-2 weeks following the procedure.
- If you feel any lumps after the procedure, please gently use a cleansing foam when washing your face and lightly roll massage the area. (for 1-2 days)
- Although it varies by individual, we recommend a series of 3 treatments at one-month intervals for the best result.
- If the area treated becomes significantly swollen or you experience severe pain after the procedure, please contact us.

※ Individual experiences may vary.
